SKILLS

Languages: Solidity, Javascript, HTML/CSS, PHP; **Frameworks:** NodeJS, ReactJS, Truffle, TailwindCSS, Web3.js, Ether.js;
Tools: Vscod, Git, Remix; **Databases:** MongoDB; **Hosting :** Firebase, Heroku

Non-technical: Project Management

WORK EXPERIENCE

Digiscript - Software Engineer

September 2019 - January 2022

London, UK

- Designed, developed and deployed web interfaces. Oversaw and managed projects for various clients.
- Built cross-platform applications and used technologies such as ReactJs, Tailwind and Javascript to develop modern websites. Increased clients website performance by 70%.
- Project manager for a team of designers and developers to design and write scalable codes and follow organisation best practices.
- Developed in-house web app. Worked on idea research and was able to develop an MVP prototype and implemented functionalities.
- Managed projects using Jira, Slack and Bitbucket. Was responsible for creating sprints and assigning tasks. Reviewed more than 50 PRs and made sure tasks was implemented in the right way.
- Consulted with more than 20 clients looking to develop an idea or build a business website for their business. Helped develop the idea and proposals by gathering user and software requirements.

Flenager - Software Engineer

August 2019 - September 2020

Lagos, Nigeria

- Created a web app MVP for a fleet management company with over 20 trucks to track driver performance and productivity.
- Gathered user and software requirements to build the right features.
- Built RESTFUL APIs that served data from MongoDB to the Javascript (EJS) front-end
- Integrated USSD and SMS API to allow users from remote areas to send information to the app.
- Implemented various APIs to live products. Used APIs like Stripe, Paystack and Africastalking.
- Collaborated with 2 other software engineers to develop a working MVP that is used by companies.
- Spoke to more than 30 target customers and users to get feedback on the product.

PROJECTS

Veranos (veranos.io) - Solidity Developer

January 2022 - present

- Wrote and deployed ERC20 tokens and ERC721 contracts using solidity to [testnets](#) & [mainnet](#)
- Interacted (Read/Write) with smart contracts using Web3.js and Ether.js
- Write smart contracts using best practices in order to deploy gas-efficient and secure contracts
- Used Blockchain framework and technologies such as Remix, Truffle and Hardhat to write and deploy contracts
- Deployed contracts to Polygon and Ethereum Mainnets and had users interact with a decentralized application
- Being current with blockchain industry and using the right Blockchain and technologies
- Implemented third-party services such as Infura, Alchemy, Chainlink and OpenZeppelin
- Cross 500 users from 4 continents in first month

EDUCATION

Swansea University - B.Sc, Computer Science

Wales, UK

September 2015 - June 2020

- Web Development using Laravel/PHP and JavaScript
- User Interface and Experience (UI/UX)
- Mobile Application
- Data Visualization
- .NET and C#
- Cryptography and Security
